INTRODUCTION

INTRODUCTION

Over the years, people have had to deal with the inadequacies of the traditional finance system. Notably, the centralization of the traditional finance system had affected the way people access financial services. Among others, the inadequacies of the finance system led to the **Global Financial Crisis of 2008**. Despite the prolonged effect of the crisis, the traditional financial system has done nothing to improve consumers' accessibility. Consumers often have to leave their funds to bank administrators, pay an excessively high maintenance fee or transaction fee, deal with middlemen and even lose their privacy/data to hackers who manipulate the centralized server. Hence, decentralized finance was introduced as a revolutionary approach towards the inadequacies of the traditional financial system.

Being powered by blockchain technology, the decentralized finance system challenges the centralized system by providing a means through which users can maintain control over their assets and interact with financial services through **decentralized applications and peer-2-peer services**. As decentralized financial services are built on the blockchain-based defi ecosystem, every data accrued is recorded on the blockchain and spread across nodes, keeping users' privacy intact.

The blockchain and cryptocurrencies are still in their early stages, yet retain the power to reshape the way financial transactions are being executed globally. The creation of new and better processes, products, and services via these ideas will take the blockchain and cryptocurrencies mainstream and eventually change the world forever and empower billions of people to transact independently from centralized institutions. However, with any growing technology or market, there is a need for improvement and innovation. The need for a simple and secure platform to aid users to transact with cryptocurrencies via blockchain technology from start to finish has never been higher.

2

ABOUT GYLIE

ABOUT GYLIE

GYLIE is in the process of developing several revenue-generating platforms. Currently, these platforms include the **GYLIE Wallet, GYLIE Exchange, GYLIE Tokens, and the GYLIE NFT marketplace**. Each platform will have its unique features and purposes, but they will all be interconnected under the umbrella of GYLIE.

GYLIE is a peer-to-peer service-based crypto platform. Users of GYLIE will have the option to exchange GYLIE tokens for various services. We aim to capitalize on massive amounts of market share from established service-based industries by allowing GYLIE TOKENS as a form of payment and by securing the transaction for both parties through the use of smart contracts.

ABOUT GYLIE

The GYLIE Wallet is GYLIE's signature feature; it is already available on both iOS and Android. Users will be able to purchase GYLIE tokens from different platforms, thus diminishing the barrier of entry to acquiring GYLIE Tokenomics will be supported on the wallet, meaning each transaction will have reflection and burn functions. There will also be several features that are exclusive to the wallet, such as price projections, reflection tracking, live graphs, and more,

GYLIE is developing a decentralized finance ecosystem that allows coin holders to access various decentralized services while earning more with their tokens. Coin holders do not necessarily have to trade constantly to earn rewards in the community. By performing transactions and holding tokens holders can earn rewards actively.

Just like any blockchain company, we believe that cryptocurrencies are the best financial tool that can help to bank the unbanked population, and also open them up to the already existing financial opportunities already provided by traditional banking services they previously had no access to.

3

OUR VISION

OUR VISION

GYLIE is committed to providing a sophisticated easy-to-use crypto wallet application that will enable anyone to store, send, receive, exchange, and swap crypto assets at users' convenience. Users will have the option to use a decentralized financial exchange (such as Atomic Swaps) without the need to provide or store user data centrally.

GYLIE will enable users across the globe to buy and sell NFTs in our marketplace at any time. In addition, GYLIE will constantly research and provide excellent blockchain technology and cryptocurrency application scenarios that will further the adoption and use cases of cryptocurrencies.

4

**WHY BINANCE
SMART CHAIN?**

WHY BINANCE SMART CHAIN?

The Binance Smart Chain is a functioning blockchain optimized for ultra-fast trading. Its ecosystem was developed for cross-chain compatibility with Binance Chain to facilitate an all-inclusive experience for users. While it runs in parallel with Binance Chain, the blockchain boasts compatibility with smart contract functionality and Ethereum Virtual Machine.

Binance Smart Chain aims to utilize the high effectiveness of Binance Chain while still leveraging smart contract features. Due to its compatibility with the Ethereum Virtual Machine, it fully supports Ethereum tools and decentralized applications. Amongst other features, the Binance Smart Chain includes a cross-chain compatibility system that allows users to transfer digital assets from one blockchain to another without friction. Furthermore, it hosts a new full-fledged environment that can be used to develop high-performing decentralized applications that can facilitate quick trade.

5

**GYLIE
ECOSYSTEM**

CRYPTO WALLET

CRYPTO WALLET

Decentralized crypto wallets are an essential factor in owning and investing in cryptocurrencies of any sort. Wallets for digital currencies are very similar to wallets for your hard, in-hand currencies, like dollars or euros; just a digitized version of your bank account. They are used to buy and store your crypto and send your crypto to others.

GYLIE Wallet is the world's simplest, most secure decentralized multi-crypto wallet application that is designed to provide DeFi access and other crypto-related use cases. GYLIE allows users to securely store their crypto assets so that they can be used for transactions on a P2P level. With this wallet, users can send and receive funds on Binance Chain (BSC), and Ethereum (ETH). They can also make cross-chain transfers between different blockchains. To make our platform even more convenient for users, GYLIE Wallet uses a modern User Interface and internationally recognized online-security practices to simplify the use of all cryptocurrencies on our platform.

With this business model, GYLIE seeks to become a platform that is accessible to users worldwide via Apple and Android devices. Therefore, GYLIE will become the go-to for global users to store their cryptocurrencies while they retain control over their private keys. Unlike traditional banks and many cryptocurrency wallets, GYLIE does not hold custody of users' funds. This means that users retain legal custody of their funds while they use the GYLIE Wallet, greatly improving security compared to centralized storage - which is prone to hacks and other forms of criminality

6

EXCHANGES

DECENTRALIZED EXCHANGE

GYILE EXCHANGE

DECENTRALIZED EXCHANGE

Amongst the use cases of the decentralized finance ecosystem, Decentralized exchange is the one. Just as its ecosystem, the decentralized exchange was developed as an alternative approach to the irregularities of centralized exchanges and their inbuilt wallet. As problems including centralized control of traders' funds, susceptibility to hacking, price manipulation, high trading fees, high withdrawal limit, and security flaws engulf centralized exchanges, decentralized exchanges were developed to provide a free-flowing tokenized economy that facilitates automatic investor privacy, low trading fees, transactional trust, and digital assets diversity.

GYILE EXCHANGE

GYILE decentralized exchange is being developed as a revolutionary approach toward the inefficiencies of the existing centralized exchanges. It is being developed to aid in the swift trading of BEP-20 tokens while still providing traders with full custody over their tokens.

By being on the high-performing Binance Smart Chain, the decentralized exchange enhances ultra-fast and cheap trading for users. GYILE decentralized exchange solves the growing problem of centralization in the exchange ecosystem by enabling a direct transfer of assets by users in its network. With its low fee structure, users can conduct trade at a fraction of the cost of Ethereum-based decentralized exchange networks. The platform's upgraded technical capabilities allow traders to complete transactions within a few seconds without divulging personal information to the network's server.

7

NFT MARKETPLACE

REWARDING CREATORS

GYILE TOKEN

NFT MARKETPLACE

Non-fungible tokens are tokenized digital assets representing real objects like art, game items, music, videos, and other collectibles. Each NFT on the GYILE NFT marketplace will have a digital signature that makes it impossible to duplicate the NFT for another. Furthermore, an NFT can only be owned by one person. This way, NFT holders can gain control and ownership over their data.

As NFTs will exist on the GYILE blockchain-based platform, buyers will be able to verify NFT ownership and easily transfer the underlying tokens between owners. GYILE NFT Marketplace offers digital artists and content writers an opportunity to monetize their assets. As it stands, the cost of minting an NFT through platforms using Ethereum is exorbitant for anyone seeking to make a living out of their talent. All minting payments on Ethereum also known as 'gas fees' are in ETH. Fortunately, the Binance Smart Chain (BSC) is bridging this gap. This is the reason GYILE is running on the BSC. Binance has a supportive ecosystem and a growing user base, as per the millions of users on Binance DEX and Binance.com.

REWARDING CREATORS

To promote the creators and help them achieve their dreams GYLIE will reward its top performers. This step will also help the promotion of the marketplace and platform. GYLIE will reward the top performers (sellers) from The NFT marketplace with GYLIE tokens every week.

GYLIE TOKEN

The \$GYLIE token will be used to access every aspect of the GYLIE ecosystem. It will serve as the underlying currency to participate in a feature on the GYLIE ecosystem. Token distribution has been used to develop the fundamental aspects of the GYLIE ecosystem. As the GYLIE token has launched on Pancakeswap, the (pre-sale) funds will be used to provide locked liquidity to the platform's liquidity pool. All liquidity GYLIE tokens in PancakeSwap will be fully locked. Our community, transparency, and trust are our highest priority.

8

FEATURES OF GYLIE

AUTOMATIC REWARD

BURN

LIQUIDITY POOL

FEATURES OF GYLIE

Automatic Reward

GYLIE is a community token and we are not going to forget its holders. The redistribution of the token is to unite the community. GYLIE is a community token, so it is necessary that the community is being treated well. Redistribution increases the confidence among the community and allows outsiders to invest in the token. For every successful transaction, 3% will be redistributed among the current holders of the coin.

BURN

Another feature that GYLIE provides is automatic burning. The goal of token burning is to remove a certain quantity of a token from the circulating supply. Burning the coin increases the price. 2% of the coin will be burned to prove liquidity with every transaction thus increasing the price which will benefit the user.

Liquidity Pool

The use of a Liquidity Pool allows GYLIE to be traded with limited slippage. The LP is large enough to allow users to do transactions as they please and will be locked to ensure the stability of the price while creating a floor price. With every transaction, 5% will be added to the liquidity pool (2.5% in BNB and 2.5% in GYLIE). This will further improve the ecosystem.

9

TOKENOMICS

TOKENOMICS

\$GYLIE 50,000,000,000 tokens

On every buy/sale transaction

- 2% burn
- 3% back to holders (reflection)
- 5% towards liquidity (2.5% in BNB and 2.5% in GYLIE)

10

OUR DAPP

OUR DAPP

There is currently no crypto company offering all of these products and services in a single app, and at best, only a subset of the services we provide are currently offered in a single app by a potential competitor.

Therefore, GYLIE has the potential to become the market leader by providing all the mentioned products and services in a single app because the integration of all these high-quality services into a single app creates an edge for GYLIE over the rest of the market.

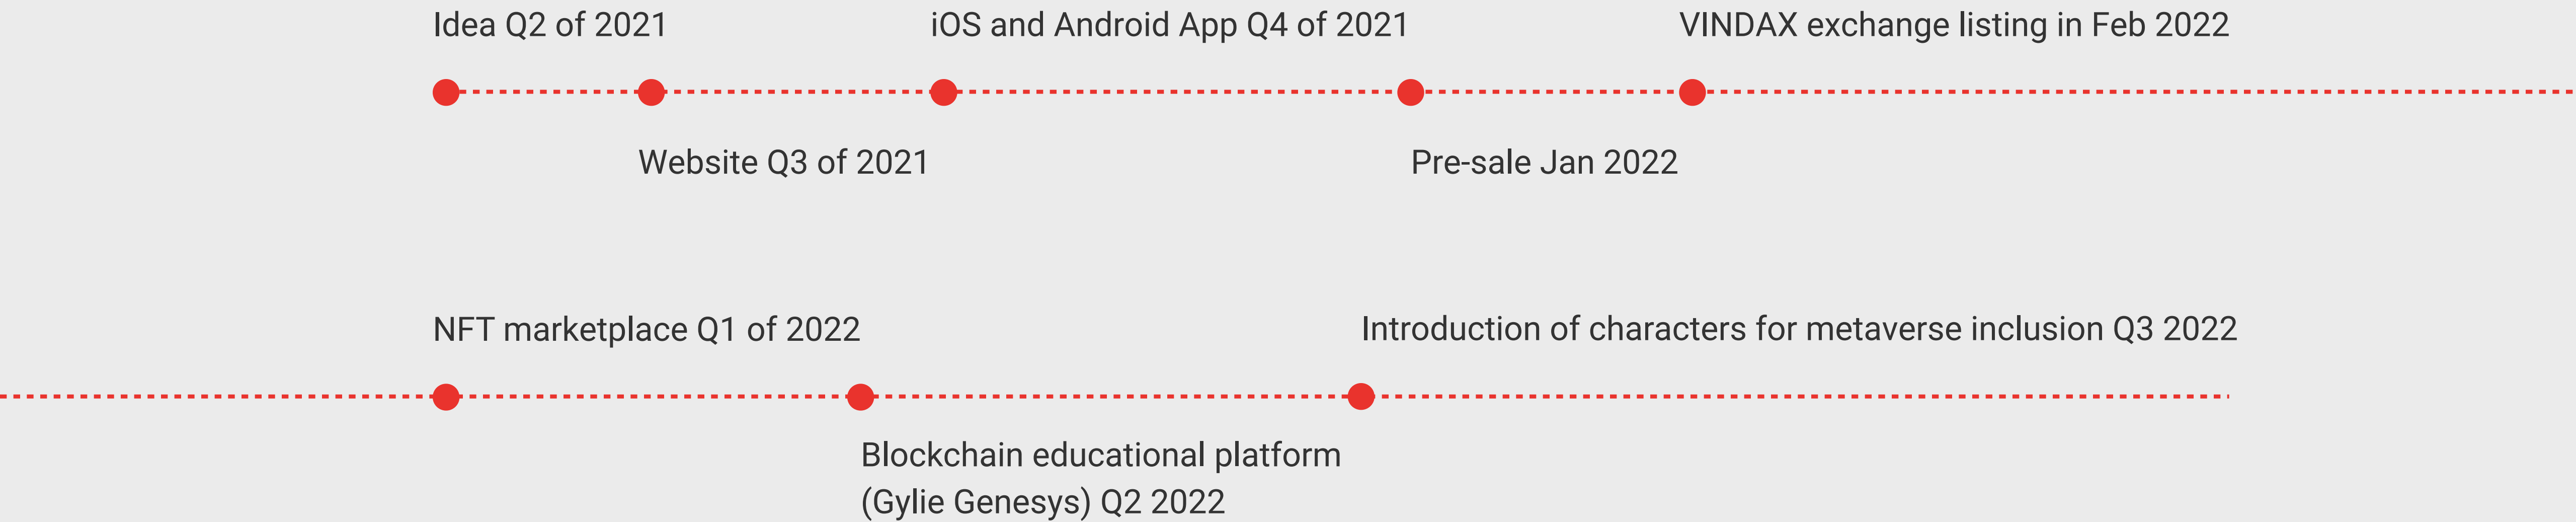

11

ROADMAP

ROADMAP

12

CONCLUSION

CONCLUSION

At GYLIE we feel the need for innovations and creativity in the decentralization of finance is important. Mass adoption is our major focus as we intend to integrate our token into various use cases. Various financial services have been built to redefine the defi space with the wide acceptance of decentralized finance.

In our quest to become a decentralized finance space leader, GYLIE is developing a highly secure wallet, decentralized exchange to aid in a quick swap of cryptocurrencies, and NFT marketplace to facilitate the buy and sell of NFTs. GYLIE will also provide private and secure transactions and many real worlds use cases. We encourage you to view our roadmap to view our full list of upcoming features. GYLIE's highest priority is providing our users with a secure, seamless, and easily accessible experience.
